AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

- (Cancelled)
- (Previously Presented) The polyaphron dispersion according to claim 12, wherein the external phase is aqueous.
- (Previously Presented) The polyaphron dispersion according to claim 12, wherein the internal phase comprises at least two liquid phases.
- (Previously Presented) The polyaphron dispersion according to claim 12,
 wherein the internal phase comprises an aqueous phase and a non-aqueous phase.
- (Previously Presented) The polyaphron dispersion according to claim 4, wherein the internal phase comprises a single aqueous phase and a single nonaqueous phase.
- (Previously Presented) The polyaphron dispersion according to claim 12, wherein the internal phase comprises an emulsion.
- (Previously Presented) The polyaphron dispersion according to claim 12
 wherein the internal phase comprises polyaphrons.
- (Previously Presented) The polyaphron dispersion according to claim 12,
 wherein the internal phase additionally comprises a solid phase.
- (Previously Presented) The polyaphron dispersion according to claim 12,
 wherein the internal phase comprises at least 60 wt.% of an agueous phase.

- 10. (Previously Presented) The polyaphron dispersion according to claim 12, wherein a component of the external phase is capable of reacting with a component of the internal phase upon the polyaphrons being disrupted or destroyed.
- (Previously Presented) A process for preparing a polyaphron dispersion as defined in claim 12, which comprises:
 - a. forming the internal phase; and
- b. forming a polyaphron dispersion comprising an external phase and the internal phase prepared in step a.
- 12. (Currently Amended) A polyaphron dispersion comprising:

 from about 5% to about 30% by weight based on the total weight of the

 polyaphron dispersion of an external phase; and

from about 70% to about 95% by weight based on the total weight of the polyaphron dispersion of polyaphrons having an internal phase, the internal phase comprising:

- (i) a first phase which is liquid, and
- (ii) a second phase which is liquid or gaseous;

wherein when the internal phase comprises at least two liquid phases, each of the liquid phases is a liquid at room temperature; and-

said-polyaphron dispersion comprises from 70% to 95% by weight of the internal phase and from 5 to 30% by weight of the external phase based on the total weight of the dispersion.

(Previously Presented) The polyaphron dispersion according to claim 12,
 wherein the second phase is gaseous and the internal phase additionally comprises a

solid phase.
